

Attention: drystock farmers, dairy grazers, farm foresters, farm consultants and rural professionals

# Whatawhata Field Day

Practices that can affect farm profits and the farm environment

## A hint of what you'll learn

Catchment management has become a widely accepted approach for improving water quality. In 2001, a farm scale experiment was established at the Whatawhata Hill-Country Research Centre. This was to evaluate the effects of an integrated package of land management actions on economic performance, biodiversity and aquatic ecosystem health.

A decade after implementation, listen to the scientists and land managers on the results to date.

**Don't miss this one-off event. Mark it in your diary now.**

**24 October 2013**

9.30 am to 3.30 pm (lunch provided)  
Whatawhata Research Farm  
1872 Whatawhata Rd  
(on SH 23, Hamilton to Raglan)

*Participating organisations:*

New Zealand Farm  
Forestry Association

NEW ZEALAND  
ASSOCIATION OF  
RESOURCE  
MANAGEMENT

S3588
